

ANAND VIHAR RESTAURANT & SWEET SHOP

Website Features Specification & Project Deliverables

WHAT WE ARE GIVING (WWG) DOCUMENT

CLIENT & PROJECT DETAILS

Client Name: Anand Vihar Restaurant & Sweet Shop

Client Address: Near HDFC Bank, Jhanda Chowk, Jhumri Telaiya, Jharkhand - 825409

Prepared By: Abhishek Singh Sahil

Developer Contact:+91 62046 35073

Document Version:1.2 (Final Commercial Release)

Date of Delivery: July 15, 2026

PROJECT SCOPE OVERVIEW

This document describes the exact features, components, configurations, and structures provided for the Anand Vihar platform. The website has been customized as a premium branding, review-sharing, and table reservation site. As requested, all online ordering, checkout carts, and payment processors are disabled/hidden by default but remain toggleable from the Admin Panel setting switches.

1. PREMIUM VISUAL INTERFACE & RESPONSIVENESS

The website is built with a bespoke styling structure utilizing premium colors, dynamic animations, and robust layouts optimized for all viewport breakpoints (Mobile, Tablet, Desktop).

- **Vibrant Brand Identity Styling**

Uses a tailored forest-green (#013e37) and traditional orange-gold (#ff9248) color system representing Indian hospitality and confectionery culture. Default native components are customized with glassmorphic cards and subtle gradient backdrops.

- **Sticky Auto-Collapsing Header Navigation**

The main navigation header sticks to the top during scroll. It features a smart collapse listener that dynamically slides away the top announcement bar to maximize screen real estate when scrolling, leaving only the primary menu links visible.

- **Responsive Typography & Mobile Layouts**

Home page headers, descriptions, and grid panels adapt seamlessly to small screens. Mobile font resizing guards prevent text clipping or overlapping, ensuring a professional appearance on smartphones.

- **Custom Brand Favicon & Slogan**

Features a beautiful custom Sweet Shop Favicon SVG containing a stylized plate, traditional Ladoo, and diamond Kaju Katli with varq silver leaf layers. The navbar features the custom slogan: 'Enjoyment hua band ? ...toh khao Kalakand!' in an animated gradient clip.

2. DYNAMIC OPERATIONS CONTROL & REVIEW PLATFORM

2.1 Admin Store Controls Settings

Allows the store manager to dynamically start/stop restaurant reservation systems and online shopping cart functionalities directly from the Admin Panel dashboard switches.

Table Reservations Toggle: Disabling this switch hides all 'Book Table' actions, CTA blocks, footer links, and reservation forms across the site. It also hides the restaurant specials section from the landing page.

Online Ordering Toggle: Disabling this switch hides the shopping cart drawer, badges, and hides all 'Add to Cart' options from menu items, replacing them with static Available / Sold Out labels for in-store purchases.

2.2 Testimonials & Community Reviews System

A fully interactive reviews portal that allows guests to upload feedback and share community ratings directly.

- **Media Attachments** Allows clients to upload up to 3 review images and short videos (under 15s) with their feedback.
- **Engagement Reactions** Supports anonymous likes and multiple reactions (Heart, Laugh, Clap) with IP/Device tracking to prevent spam.
- **Community Comments** Enables visitors to comment and reply in threaded structures to review entries, creating a lively customer community.
- **Admin Moderation Approval** All testimonials are held in a pending state until approved by the admin. Features bulk moderation actions.

3. ADDITIONAL CORE CAPABILITIES

3.1 Table Reservations Booking System

Includes an interactive booking slot submission form. When a slot is requested, the system runs validation checks and fires an automated email confirmation to the client and an instant email alert to the admin.

3.2 Public Blog Chronicles (Recipes & Culture)

Allows all logged-in users (not just admins) to write, edit, and publish blog articles about sweets and culture. Standard users are restricted from editing or deleting posts written by others, while administrators maintain overriding moderation rights.

3.3 Testimonial Media Gallery Integration

The public Gallery page dynamically aggregates media from two sources: manual admin uploads, and approved testimonial images and videos submitted by customers, automatically sorting them by date.

4. TECHNICAL ARCHITECTURE & STACK

Layer	Technologies Used	Core Functions
Frontend	React.js, Tailwind CSS, Framer Motion	Interactive UI, glassmorphic styles, responsive web screens
Backend	Node.js (Express), ES Modules	Secure REST APIs, email routing, validation controllers
Database	MongoDB (Mongoose ODM)	Data schema persistence, Settings collection state model
Storage	Cloudinary SDK, Multer	On-the-fly media compression (50-80% savings), secure image streams
Security	JWT (HttpOnly Cookies), bcryptjs	Rotate refresh tokens, password OTP recovery, secure login guards

5. COMMERCIAL TERMS & ANNUAL CONTRACT

The financial arrangements, support terms, and operational boundaries agreed upon for the Anand Vihar project are detailed below.

Item Description	Amount	Billing Frequency
Total Web Development & Custom Systems Installation	INR 21,000	One-Time (50% on 16th July 50% till 20th July)
Annual Technical Maintenance & Security Plan	INR 4,000	Yearly Maintenance Charge (Post 1st year)
Domain Name Registration, Hosting Server, SMTP Email Accounts	At Cost	Paid directly by Client (Anand Vihar) in future

● **milestone Payments (Development Cost)**

The total project cost is locked at INR 21,000 as discussed. The payment schedule is split as follows: 50% (INR 10,500) will be paid on 16th July, 2026, and the remaining 50% (INR 10,500) will be settled by 20th July, 2026.

● **Domain, Hosting, and Third-Party Costs**

Anand Vihar is solely responsible for payment of all future domain registration renewals, web hosting subscription services, professional email servers, or any external API charges (e.g. Cloudinary premium tiers). These costs are not included in the development fee.

● **Technical Support SLA & Glitch Resolution**

We will provide complete technical support for any software glitches, database connection crashes, email dispatch failures, or functional bugs. Bug troubleshooting and system crashes under typical load are covered.

● **Annual Maintenance Charge (AMC)**

A maintenance charge of INR 4,000 per year will apply after the initial development launch. This charge covers routine server health optimization audits, weekly database backups security management, and minor content update configurations (such as menu price adjustments).

DELIVERY & SIGN OFF

The platform has been configured to build cleanly and is optimized for launch. This deliverables checklist stands verified under our final production guidelines. For future scaling (such as activating payment gateways or online checkouts), the underlying architectural structures are already fully built in.
